

THE PERFECT NOSE

DOES IT EXIST?

THERE IS NO SUCH THING AS A PERFECT NOSE, BUT DR WILLIAM MOONEY WILL ENDEAVOUR TO CREATE YOURS. TO ACHIEVE YOUR DESIRED NOSE HE WILL TAKE INTO ACCOUNT A MYRIAD OF INDIVIDUAL AESTHETIC AND FUNCTIONAL NASAL ASPECTS.

Cosmetic Nasal Surgery begins with a thorough assessment of your face by looking at the shape of your nose from front on, laterally, obliquely, and inferior views. Other aspects such as the shape of your face and skin type are also greatly considered in conjunction with your age, gender, ethnicity, height, posture and body shape. It is extraordinary, but personality and occupation are also important considerations in order to create a balance and facial attractiveness.

To achieve optimal results Dr Mooney prefers to meticulously plan your procedure with you. This facilitates his well-considered and performed procedure which concludes over a few weeks.

Moving toward the perfect nose...

The nose is the axis of the face being the static centrepiece around which all the dynamic features take anchor. Variations in the contour of the nose have a strong but subtle effect on the entire facial appearance. When looking at your nose in a mirror it is evident that by pushing up only a millimetre it is possible to make your nose look 'piggy'. Where as the same millimetre of depression can make your nose look hooked or 'witchy'.

Many patients are not sure what is 'wrong' with their nose, they just don't like it. Where as others may not be self assessing accurately, for example, they may be fixating on the tip and missing a subtle bump on the bridge.
